AegisDrive AI — Executive Dataset Analysis Report

Source File: **indian_roads_sample.pdf** | Health Score: **90/100**

Total Rows Processed	Total Columns	Total Missing Cells	Data Quality Score
500	**24**	**497**	**90 / 100**

Column Schema & Data Quality Audit

Column Name	Data Type	Null Count	Null %	Unique Values
accident_id	int64	0	0.0%	500
city	object	0	0.0%	8
state	object	0	0.0%	7
latitude	float64	0	0.0%	500
longitude	float64	0	0.0%	500
date	object	0	0.0%	410
time	object	0	0.0%	24
hour	int64	0	0.0%	24
day_of_week	object	0	0.0%	7
is_weekend	int64	0	0.0%	2
road_type	object	0	0.0%	3
lanes	int64	0	0.0%	6
traffic_signal	int64	0	0.0%	2
weather	object	0	0.0%	3
visibility	object	0	0.0%	3
temperature	int64	0	0.0%	26
traffic_density	object	0	0.0%	3
cause	object	0	0.0%	5
accident_severity	object	0	0.0%	3
vehicles_involved	int64	0	0.0%	5

AI Recommendations & Safety Action Items

1. Complete missing values using KNN or median imputation prior to machine learning modeling.
2. Standardize categorical text casing to eliminate duplicate categorical buckets.
3. High risk hotspots should be cross-indexed with geographic GIS coordinates for spatial enforcement.
4. Conduct automated outlier filtering on extreme numerical values before production deployment.
